INTRODUCTION.

This booklet provides information relating to Bethlehem Structural Shapes compactly arranged for use in designing, thus promoting ease of reference and ready selection of the most economical sections.

The first tables comprise the principal dimensions and properties of all Bethlehem shapes best adapted for use as beams, arranged substantially in the order of their flexural strengths.

Following this are tables of unit stresses to be used in designing centrally loaded columns for various usual ratios of length to least radius of gyration, these being based on the A. I. S. C. formula.

The last table herein shows the most economical Bethlehem shape when used as a beam in flexure corresponding to any required section modulus from 6.43 for the smallest 6-inch joist to 1103.6 for the largest 36-inch girder.

These tables provide all the usual information necessary in beam and column design.

In computing the weights and properties of all sections the fillets have been included.

The dimensions, areas, and weights presented herein are theoretical and subject to the usual variations.

Other information relating to Bethlehem Structural Shapes is shown in the following catalogues: S-27, "BETHLEHEM STRUCTURAL SHAPES"; S-34, Supplement thereto; and S-28, "BETHLEHEM STEEL JOISTS AND STANCHIONS, ETC."

Standard structural shapes, including American Standard I Beams and Channels, Ship Channels, Equal and Unequal Angles, Bulb Angles, Z-Bars, and Car Building Shapes are shown in catalogue S-30, entitled "STANDARD STRUCTURAL SHAPES, ETC."

ALLOWABLE UNIT STRESSES FOR COLUMNS

AMERICAN INSTITUTE OF STEEL CONSTRUCTION, 1923

Main, and Short Secondary Members: ratios $\frac{l}{r}$ from 0 to 120.

Allowable stress in Pounds per Square Inch:

15,000 for ratios $\frac{l}{r}$ from 0 to 60.

$$\frac{18,000}{1 + \frac{l^2}{18,000 r^2}}$$
 for ratios $\frac{l}{r}$ from 60 to 120.

The tables of Allowable Unit Stresses for Columns give the allowable stress corresponding to each integral value of l/r , together with the difference, Δ , between each pair of such allowable stresses standing adjacent to each other in the table. As the stresses decrease with an increase in l/r , all the differences are negative. To find the allowable stress for any intermediate value of l/r , look up the value of the stress for the integral part of l/r , and the difference, Δ , between this stress and that corresponding to the next higher value of l/r . Corresponding to this difference there will be found in the Interpolation Table the values of $.10 \Delta$ to $.90 \Delta$ corresponding to the $.1$ increments in l/r . If l/r is given to hundredths, one tenth the increment for ten times the number of hundredths and the increment for the number of tenths may be added together. As this increment is negative, subtract the number so obtained from the stress for the integral part of l/r . The result is the allowable stress for the given l/r . The computed difference should be rounded up to the units place before subtracting.

For example, suppose the allowable stress is desired when $l/r = 107.37$

The allowable stress when $l/r = 107$ is 11,002

The difference, $\Delta = -80$

The difference for $\Delta l/r$ of .30 is -24.0

One tenth the difference for $10 \times .07$ or .70 is - 5.6

The resulting difference is -29.6 or -30

The allowable stress when $l/r = 107.37$ is 10,972

INTERPOLATION TABLE FOR DIFFERENCES Δ

79	7.9	15.8	23.7	31.6	39.5	47.4	55.3	63.2	71.1
78	7.8	15.6	23.4	31.2	39.0	46.8	54.6	62.4	70.2
77	7.7	15.4	23.1	30.8	38.5	46.2	53.9	61.6	69.3
76	7.6	15.2	22.8	30.4	38.0	45.6	53.2	60.8	68.4
75	7.5	15.0	22.5	30.0	37.5	45.0	52.5	60.0	67.5
74	7.4	14.8	22.2	29.6	37.0	44.4	51.8	59.2	66.6

It should be noted that the calculation could be based on the stress for $l/r = 108$ in the above problem, in which case $\Delta l/r = -.63$, and the increments of stress are all positive, which simplifies calculations somewhat.

ALLOWABLE UNIT STRESSES FOR COLUMNS

AMERICAN INSTITUTE OF STEEL CONSTRUCTION, 1923

Secondary Members Only: ratios $\frac{l}{r}$ from 120 to 200.

Allowable unit stress in Pounds per Square Inch:

$$\frac{18,000}{1 + \frac{l^2}{18,000 r^2}} \text{ for ratios } \frac{l}{r} \text{ from 120 to 200.}$$

No column or strut is permitted whose $\frac{l}{r}$ is greater than 200.

Beams to be secured against yielding sideways.

BETHLEHEM STEEL COMPANY

BETHLEHEM, PA.

PARTIAL LIST OF PRODUCTS

STRUCTURAL STEEL SHAPES: Bethlehem Beams, Joists and Stanchions; Rolled Girder Beams, Rolled Columns; Standard Beams, Channels and Angles; Standard and Special T and Z Bars; Plain and Fabricated; Crane Rails; Rolled Steel Slabs for Column Bases.

SHIPBUILDING SHAPES: Ship Channels, Bulb Angles, and Hatch Sections.

CAR BUILDING SHAPES: Beams, Channels, Angles, Bulb Angles, Z Bars, Center and Side Sill Sections, Belt Rail, Door Spreader, and Side Stake Sections.

PLATES: Universal and Sheared; Circular (Heads), in all grades for all purposes; Miscellaneous Pressed Work.

PILING: Lackawanna Steel Sheet Piling.

BRIDGES AND FABRICATED BUILDINGS: Designers, Builders, Fabricators and Erectors of all types of Bridges and Steel Structures. Buckle Plates.

RAILROAD TURNABLES: Bethlehem Twin-Span Turntables; Balanced and Continuous Turntables.

FLANGED AND DISHED BOILER HEADS, SPECIAL FLANGED PRODUCTS.

AGRICULTURAL STEEL AND SPECIALTIES: Standard and Special Shapes.

AUXILIARY LOCOMOTIVES.

BARs AND BANDS: Muck Bar, Refined, Double Refined, Chain, Stay Bolt, Special Stay Bolt, Horseshoe and Engine Bolt Iron; Bessemer, Open Hearth, Electric and Alloy Steel; Concrete Reinforcing Bars.

BILLETS, BLOOMS, SLABS, SKELP AND SHEET BARs.

BOILER TUBES: Lap Welded; Charcoal Iron, and Steel.

BOLTS, NUTS, RIVETS, SPIKES, POLE LINE MATERIAL.

CARS: STEEL AND COMPOSITE FREIGHT, STEEL PASSENGER, MINE AND INDUSTRIAL.

CAR WHEELS: Rolled Steel.

CASTINGS: Steel, Iron, Brass and Bronze; Stainless Clad; Centrifugal.

COAL: Gas and Steaming.

ENGINES: Blowing, Producer Gas, and Gas.

FERRO-MANGANESE, SPIEGELEISEN, COKE AND COKE BY-PRODUCTS.

FORGINGS: Drop, Upsetter, Hammered and Hydraulically Pressed; All sizes and types; Forged Shafts.

GEARS AND PINIONS: Cut and Cast; Bridge Operating Machinery.

INDUSTRIAL AND MINE TRACK WORK, STEEL MINE AND INDUSTRIAL TIES.

INGOT MOULDS: All sizes.

MACHINERY: Hydraulic Machinery and Equipment; Special Machinery of all types and designs.

OIL BURNING SYSTEMS.

OIL REFINERY EQUIPMENT.

PIG IRON: Standard Grades, Special Grades, Mayari, Silvery Mayari.

PIPE AND TUBULAR GOODS: Lap and Butt-welded, Pipe, Casing and Tubing.

PULVERIZERS FOR COAL AND OTHER MATERIALS.

RAILS AND ACCESSORIES, FROGS AND SWITCHES. BETHCO RAIL ANCHORS.

ROLLED STEEL BLANKS FOR GEARS, PINIONS, FLY WHEELS, ETC.

ROLLS: Carbon and Alloy Steel.

SHEET AND TIN MILL PRODUCTS: ROLL ROOFING, RIDGE ROLL.

SPECIAL STEEL FOR AUTOMOBILE FORGINGS AND MACHINED PARTS.

STEEL AXLES: For Passenger and Freight Cars, Engine and Tender Trucks; Driving; Motor; Electric and Mine Car; etc.

TOOL STEEL, CARBON AND ALLOY: Bethlehem Special High-Speed Tool Steel; Non-shrinkable; Rock and Mine Drill Steel; Special Tool Steel; Small Tools, etc.

WIRE RODS, WIRE NAILS, WIRE, Woven Field and Poultry Fencing. Steel Fence Posts.
